PHOBOS**

PHOBOS SKYFORCE

AUTONOMOUS UNMANNED AERIAL
INTERCEPTOR SYSTEM

THE SYSTEM
DOES NOT REQUIRE
AN FPV PILOT

"FEAR FOR ENEMY DRONES.
PROTECTION FOR OUR CITIES."

THE PROBLEM

Modern **air defense systems** are critically limited when countering mass attacks by kamikaze drones (such as Shahed, ZALA, Lancet).

× **SAM systems** — too expensive and inefficient against small, low-speed targets.

× **FPV drones** — unable to catch high-speed aerial targets.

× **MANPADS** — limited ammunition, high cost, and unsuitable for mass deployment.

PROJECT GOAL

Development and serial production of **PHOBOS**, a high-speed autonomous interceptor capable of detecting, tracking, and destroying enemy drones without pilot involvement.

Enemy UAVs

PHOBOS

MISSION & PURPOSE

Thanks to full automation, interceptor drones do not require an operator to execute flight missions. This approach ensures high interception efficiency within the detection zone of ground-based stations.

PHOBOS is a multi-layer response system designed to perform several key tasks:

1. Airspace monitoring and area-of-responsibility control.
2. Detection and tracking of enemy drones (reconnaissance UAVs, Shahed, FPV)
3. Autonomous interception and destruction using a high-speed UAV

OPERATING MODE

AUTOMATIC MODE

The system independently identifies threats and launches the UAV on an interception course.

PHOBOS TECHNICAL SPECIFICATIONS

Flight time: Up to 16 minutes

Payload:
0.5 kg (warhead / detonator)

Camera:
Walksnail AVATAR Eclipse (night FPV)

Communication protection:
ELRS DBR4 915/2400 MHz,
encryption, anti-jamming

Video transmitter:
2-5 W, adjustable during flight

Hit accuracy:
Up to 0.5 m

Kill probability: 0,8

Self-destruction:
Automatic upon loss of communication

Dimensions:
470 × 410 × 130 mm ±5%

Takeoff weight: Up to 5 kg

Platform type:
Multicopter (FPV drone)

Maximum speed:
Up to 280 km/h

Cruise speed:
200 km/h

Flight range: Up to 15 km

Operational / max altitude:
1,500 m / 4,000 m

KEY ADVANTAGES OF PHOBOS

- Ultra-fast response — up to **280 km/h**
- Effective engagement range up to **5 km**
- Purpose-built for **Shahed / Lancet / ZALA targets**
- Combat payload with remote detonation
- Fully **autonomous** system, no professional pilots required
- Fully expendable platform
- Operates in **autonomous** modes
- **Dozens of times cheaper** than traditional air defense missiles
- Designed for serial production, including brigade-level deployment
- **Minimal logistics**, easy maintenance

CONCLUSION

PHOBOS is an autonomous, fast, and precise short-range air interception system.

It fills the tactical gap between FPV drones, SAM systems, and MANPADS, enabling effective protection of **critical infrastructure, mobile units, and rear-area assets.**

Developed with the operational needs of the **Armed Forces of Ukraine** in mind and optimized for **locally scalable production.**
